

morswift rubber tubing

...quality meets innovation!

MorSwift's patented rubber banding systems help companies reduce labor costs, boost production output and improve employee efficiency.

Fast, efficient banding performance is dependant upon the level of quality that goes into the rubber tubing used. Following years of research and development in collaboration with MorSwift, **Alliance Rubber Company** successfully created a high quality extruded rubber tubing optimized for the MorSwift banding system.

MorSwift Rubber Tubing

- packed in 10 lb cartons
- 40 cartons per pallet
- each carton yields 3,250 rubber band enclosures (1/2" wide band)
- standard 2" LFL (lay flat length) tubing, available in various colors
- one color band imprinting, optional

Why MorSwift rubber tubing (from Alliance Rubber Company) is different:

- **Manufactured with top quality rubber free of impurities and imperfections.**
 - ▶ Ensures rubber band enclosures are smooth with a consistent elasticity. Facilitates easier band cutting in the MorSwift machine and reduces premature blade wear.
- **Custom production process involves careful extrusion and handling.**
 - ▶ Provides consistent band wall thickness and tube diameter that is critical for easy tube loading and fast throughput in the MorSwift machine.
- **Packaging process involves careful tube aeration and hand-folding inside cartons.**
 - ▶ A round tube profile free of excessive folds and kinks is critical to maximizing the MorSwift system's band catch rate and output capacity. Tube aeration and talc help prevent the tubing from sticking together and hand-folding ensures easy deployment out of the carton when loaded into a MorSwift machine.
- **Ecologically sustainable and earth-friendly.**
 - ▶ Components used in the manufacture of rubber do not inhibit their availability for use by future generations and degrade when exposed to natural environment, a process releasing no harmful materials or by-products.
- **Experience does count.**
 - ▶ Founded in 1923 and headquartered in the USA, Alliance Rubber is a recognized global leader in the manufacture and distribution of rubber products. Alliance's established reputation ensures rubber tubing consistently meets MorSwift specifications for quality, fair pricing and availability.
